

Three independent LDOS algorithms agree

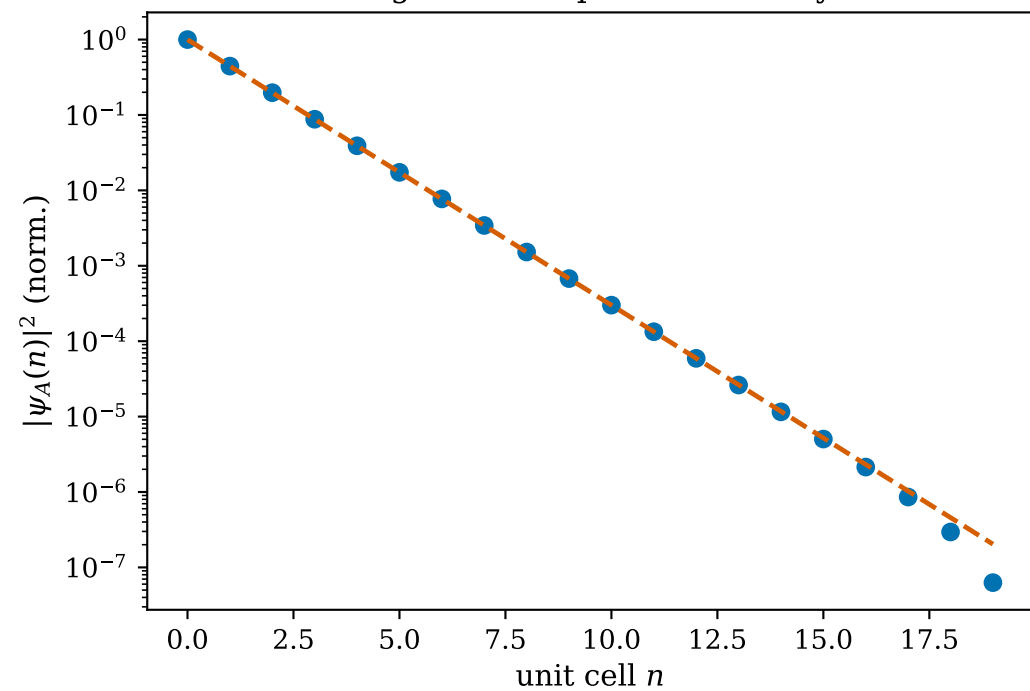

— Green's function (solve)
 - - biorthogonal eig-decomp
 ... semi-infinite (Sancho-Rubio)

OBC has edge modes; PBC does not

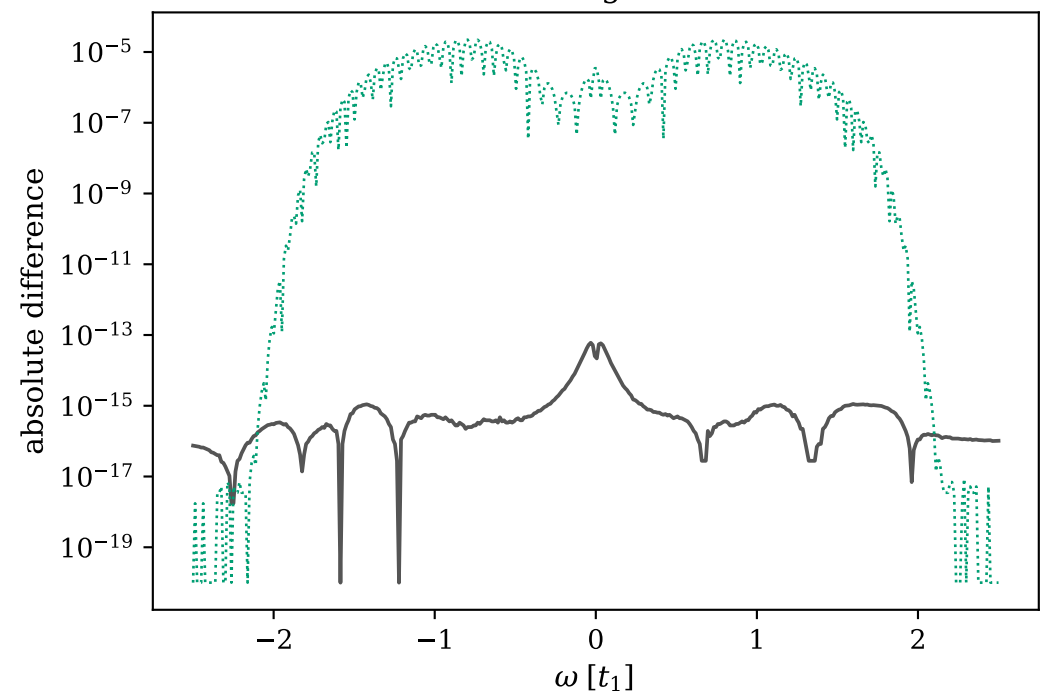

● OBC
 × PBC
 gap window

Edge-mode exponential decay

● numerical $|\psi_A(n)|^2$
 - - $e^{-2n/\xi}$, $\xi = 2.47$

Pairwise agreement

— $|\text{GF} - \text{eig-decomp}|$
 ... $|\text{GF} - \text{semi-infinite}|$
